Let's Start!

IT Occupations.

Learning Outcome:

Describe common activities at work to a using short sentences in familiar spoken and written situations.

Make the result report from the analysis of the information system, based on the customer requirements, following established rules and protocols.

Can Do Statements:

- I can talk about the differences among jobs and occupations related to IT.
- I can explain duties related to different job occupations in IT.
- I can explain why some occupations are different.

Ask your partner:

- What jobs in the IT department do you know and which are the best paid?
- In your opinion, what skills should a programmer and a software developer have?

Let's Explore!

Posting a Job Offer.

Instructions: Read the text below.

Receptionist: New times, how can I help you?

Manager: I'm calling from HIGHTECH. We would like to post a job offer with your newspaper.

Receptionist: What positions are you advertising?

Manager: Our company is currently hiring software developers and programmers.

Receptionist: Are these two positions different? Your competitors only hired one person for the same post.

Manager: As a multinational we define these two jobs differently; they respond to two different steps in our processes. It also guarantees the effective teamwork in our department. We want our programmers to write, test, debug, and update the detailed instructions for computer programs so they can run and perform their functions. Our programmers should design and test logical structures for solving problems. On the other hand, we want our software developers to be the creative minds behind computer programs. They need to write automated tests, keep systems updated, and write documentation. They also need to read codes.

Receptionist: What duties would you like to include for the post?

Manager: Our software developers are people with high skills in researching, designing, programming, and testing. This person should be an expert at finding solutions to problems, upgrading software, and recommending customers. It is also important that they can ensure functioning of programs and document key aspects of the system as a reference for maintenance and upgrades. On the contrary, prospect programmers will be mostly in charge of the implementation of software; someone with good algorithmic knowledge who can write codes for many kinds of software. Back to software developers, they have to make software clean, well-factored, and error free. In addition, they write programs in a variety of computer languages, such as C++ and Java. Finally, it is very important that they can update and expand existing programs, using code libraries to simplify the writing.

Receptionist: Ok, we have all the necessary information to publish the ad.

Let's Practice!

Duties Regarding Occupations in IT!

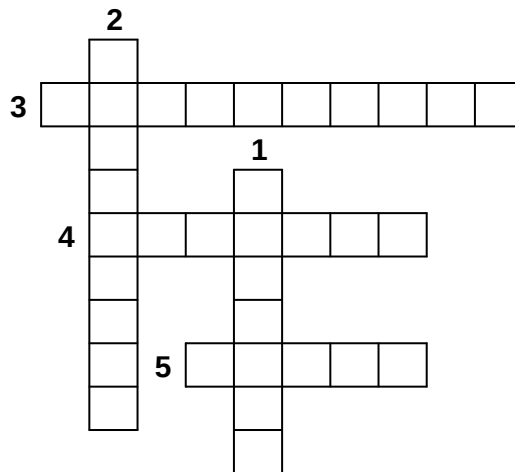

Instructions: Read the clues. Find the words in the word search below.

Down

1. When a developer handles different codes. What does he do?
2. When a programmer works with test logical structures for solving problems, what does he do?

Across

3. When a software developer works with computer programs, what does he do?
4. When a software developer improves software, what does he do?
5. When a programmer works with a lot of codes for many kinds of the software, what does he do?

Let's Practice!

Explaining differences between occupations!

Instructions: Select the correct answer.

1. A software developer _____ a lot systems information.
 - a. search
 - b. searches
 - c. to search
 - d. searching
2. A programmer _____ software all the time.
 - a. deletes
 - b. updates
 - c. updating
 - d. deleting
3. Software developers _____ different programming languages.
 - a. speak
 - b. speaking
 - c. interprets
 - d. interpret
4. A programmer _____ to handle different codes.
 - a. have
 - b. works
 - c. has
 - d. working
5. A software developer _____ a software computer.
 - a. tries
 - b. tests
 - c. testing
 - d. trying

Extension Activity

Different Duties.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for further information about the different roles and responsibilities in IT.
- Describe the different functions for each role.
- Write a paragraph describing the main differences between roles.
- Show your paragraph to your classmates and teacher.

Self-Assessment

Yes **No**

- I look for information about roles in IT. ☐ ☐
- I describe different functions in IT roles. ☐ ☐
- I write a comparative paragraph to show my understanding. ☐ ☐
- I show my paragraph explaining to my classmates and teacher. ☐ ☐

Target Words

- advertise** (verb): to call public's attention about a product, service or need through a paid announcement published in newspapers, magazines, over radio or television
e.g. What positions are you advertising?
- currently** (adverb): at the moment , now
e.g. Our Company is currently hiring software developers and programmers.
- duty** (noun): functions, tasks or activities that one is expected or required to do by moral or legal obligation.
e.g. What duties would you like to include for the post?
- upgrade** (verb): to improve the quality or value of something
e.g. This person should be an expert upgrading software and recommending customers.
- hire** (verb): to obtain the services of a person for wages or other payment
e.g. Your competitors only hired one person for the same post.
- prospect** (noun): a potential or likely candidate
e.g. Our prospect programmers will be mostly in charge of the implementation of software.

Learning Points

Compound Nouns and Collective Nouns.

A noun is a word that identifies a person, animal, place, thing, or idea. You can find **compound** and **collective Nouns**.

Collective nouns are names for a group of individuals or a number of animals, places, things, objects, concepts or ideas. These nouns take a singular verb when we think of them as a group.

* Let's see below some examples:

- A herd of elephants.
- A range of mountains.
- A gang of thieves.
- A pack of cards.
- A board of directors.

A **compound noun** is the result of combining two words. Below, you can see how they look:

- **Separate words:** orange juice, real estate, post office, car park.
- **Words linked by a hyphen:** mother-in-law, washing-up, check-in.
- **One word:** notebook, classroom, football, bedroom, toothpaste.

Examples

- *We would like to post a job offer with your newspaper.*
- *It also guarantees the effective teamwork in our department.*

Learning Points

Action Verbs and Participle Adjectives.

Action Verbs are verbs that express actions that people, animals, objects, or process nature can do.

Participle adjectives are participles which can be used as adjectives by adding the **-ed** particle to talk about a person's feelings or **-ing** to talk about the specific cause of feeling to the base form of the verb.

Below there are two charts of **action verbs** and **participles adjectives** related to programmers and software developers.

Action Verbs		
Calculate	Command	Edit
Simulate	Control	Launch
Run	Test and update	Debug

Participle Adjectives		
Alarm	Alarmed	Alarming
Amuse	Amused	Amusing
Confuse	Confused	Confusing

Examples

- *They write automated tests, keep systems updated, write documentation, and they need to read codes.*
- *Update and expand existing programs and Use code libraries, to simplify the writing.*
