Let's Start!

IT Solutions Provider: We solve every problem in every business.

Learning Outcome:

Describe common activities at work to a using short sentences in familiar spoken and written situations.

Make the result report from the analysis of the information system, based on the customer requirements, following established rules and protocols.

Ask your partner:

- How should IT providers talk to customers?
- What does help desk need to do to provide assistance effectively?

Can Do Statements:

- I can explain how to solve a specific problem related to IT in a small business.
- I can talk about different possible problems in a small business.
- I can identify a problem and a solution in a small business.

Let's Explore!

Contact your solution provider ASAP!

Instructions: Read the text below.

- IT:** Good morning! Thank you for calling our help desk, how can I help you?
- Customer:** Good morning. I need to get in touch with my IT solutions provider's help desk. Something is wrong with our server. I talked to an Engineer earlier who said that I should call a solution provider, so they can help me to solve the problems with the software. I'm really worried because we lost all human resources information and sensitive confidential information was involved. For instance, we lost information about providers, employees' personal information, and other businesses' financial information. What can I do?
- IT:** Would you like remote access or would you like to book a visit?
- Customer:** Remote assistance, please.
- IT:** I checked your account and it seems that you accidentally downloaded a software that is incompatible with ours. Some of the records in the system show an updated malicious anti-spyware, that's why your server crashed. Also, when you set up the new infrastructure and some devices weren't properly converted, this could cause the failure.
- Customer:** So, what do I need to do now?
- IT:** There are different solutions: first, I can remotely create a backup and try to rescue the information you lost; if that doesn't work, we can install two servers to store the information. I have a technology provider that could give you a hand with that, then we focus on recovery of the information.
- Customer:** Let's try with the remote access and see if it works.
- IT:** Absolutely. You need to start your server, click on delete all provider information, drag the mouse to the infrastructure back up icon, and click reset. Then, the server will pop up a request window, accept it so the system can upload again.
- Customer:** I'm sorry, I don't think I did it right, the system is showing a black screen.
- IT:** Not a problem! Our client's needs are very important to us. That's why I'm sending someone to your business right now.
- Customer:** Thank you!

Let's Practice!

Small businesses and IT.

Instructions: Circle the correct word to complete the sentence.

1. I need to get in touch with my IT (solutions / solution / a solution) provider.
2. They can help me to solve the problems with the (software / the software / softwares).

- **drag** (verb): to move icons or items on a computer screen using a mouse
e.g. You need to start your server, click on delete all provider information, drag the mouse to the infrastructure back up icon, and click reset.
- **help desk** (noun): a service that provides information and assistance to people or companies, especially those using networks and servers
e.g. Thank you for calling our help desk, how can I help you?
- **get in touch with** (expression): approach, contact, or try to reach someone
e.g. I need to get in touch with my IT solutions provider's help desk.

Learning Points

Countable and Uncountable Nouns.

Some nouns are **countable** (we can use them in singular and plural forms). Some are **uncountable** (they only have a singular form).

Countable nouns are the ones that you can count (1, 2, 3...). However, **uncountable nouns** are the ones that need a specific unit to measure them.

For example:

Use **a / an** with *singular countable nouns* and add **-es or -s** to form the *plural form*. But, if you want to refer to plural forms with *uncountable nouns*, you will need to use **some**.

Countable	Uncountable
<i>a company</i> <i>a business</i> <i>devices</i>	<i>some Information</i> <i>some infrastructure</i> <i>some knowledge</i>

Many or How many?

vs

Much or How much?

Countable	Uncountable
How many is used when you want to ask the quantity of something. It is only used with plural countable nouns. For example: <i>How many problems does the program have?</i> <i>The program has 2.</i>	How much is used to ask for the price or the amount of something. It is used with uncountable nouns. You always use the noun in singular with how much, but you can answer the question using plural. For example: <i>How much information does the manager need?</i> <i>He needs a lot of information.</i> <i>He needs 3 books that has that information.</i>

Examples

- I checked your account and it seems that you accidentally downloaded a software that is incompatible with ours.*
- I'm sorry, I don't think I did it right, the system is showing a black screen.*
- We lost information about providers, employees' personal information, and other businesses' financial information.*
- Also, when you set up the new infrastructure and some devices weren't properly converted, this could cause the failure.*

Learning Points
