**Let's Start!**

Looking for an IT solutions provider.

**Learning Outcome:**

Describe common activities at work to a using short sentences in familiar spoken and written situations.

Make the result report from the analysis of the information system, based on the customer requirements, following established rules and protocols.

Can Do Statements:

- I can define IT solutions for an enterprise.
- I can describe a problem in an enterprise related to IT.
- I can explain different ways to solve IT problems in an enterprise.

Ask your partner:

- What kind of help do you think the IT department offers?
- Do you know what kind of problems the IT provider solves?
- What IT providers do you know or have you heard about?

Let's Explore!

Understanding and Offering IT Solutions to an Enterprise.

Instructions: Read the text below.

In today's session, we are planning to discuss IT solutions for an enterprise. It is necessary to bear in mind that a product or service is a solution that a service provider offers. It is also a value added that a salesperson or a reseller provides to a client with the purpose of addressing a need. For instance, an IT solution provider can recommend

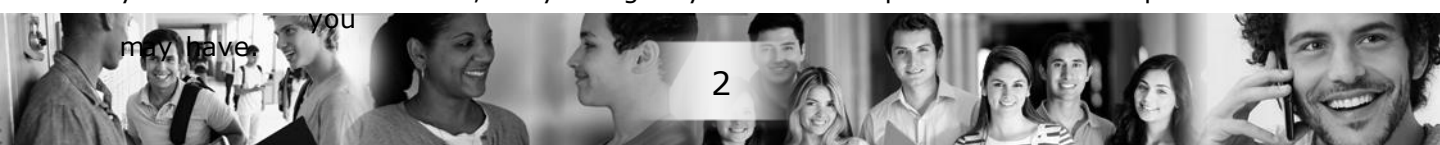

a new server or provide maintenance to repair computers or any other device. The IT solutions department handles installation and support according to the needs and infrastructure of usually small to medium enterprises.

I have experience working for several companies. All of them, at some point, presented different problems related to IT. I remember one which had integration issues when new technologies were implemented; every time they had to look for the information in different databases, the information was duplicated. I also remember one of these companies never did backups of information. Omitting this important step generated them different difficult situations. If this is your case, you can implement a backup solution plan and adopt a data disaster recovery procedure. This way, you can avoid losing information when there is, for instance, a power outage or a server crash. There are other common mistakes. For example, not taking precautions about security risks or hackers and waiting until something breaks can seriously affect your company.

There are different ways to solve these issues. You can hire a cloud service to store all your business' information. It can help you to reduce costs if you are a start-up or have

a small company. You have to do it as soon as possible to avoid having any problems in the

near future. If you are thinking about hiring a consulting company, it can be a good idea. Some of them offer virtual help and you can request assessment on the specific issue you have to solve. Besides, they can give you different options to solve the problems

Let's Practice!

Defining IT Solutions.

Instructions: Underline the correct word to complete each sentence.

1. An IT solution provider (can / can't / have to) recommend a new server.
2. An IT supplier (has to / cannot / doesn't have to) provide maintenance to repair computers or any other device.
3. The IT solutions departments of the companies (has to / can to / have to) handle installation and support according to the needs.
4. You (can't / can / don't have to) request assessment from a consulting company on the specific issue you have to solve for your company.

Let's Practice!

Solving an IT problem.

Instructions: Select the correct answers.

1. In today's session, we _____ to discuss IT solutions for an enterprise.
 - a. are planning
 - b. are discussing
 - c. aren't sharing
2. At this conference, we _____ to the conclusion that a product is a solution that a service provider offers.
 - a. are come
 - b. are coming
 - c. is coming
3. The IT solution provider we hired _____ maintenance to repair computers.
 - a. to provide
 - b. is providing
 - c. providing
4. The IT solution department _____ the needs of our company in order to handle installation and support of new software.
 - a. is coming
 - b. is denying
 - c. is analyzing
5. _____ the storage system we have in our business. We think a cloud service is more appropriate.
 - a. We are changing
 - b. We aren't changing
 - c. Are we changing

Extension Activity

IT Solutions in Enterprises.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for information about common IT solutions in enterprises.
- Describe how they work.
- Write a paragraph about those solutions.
- Show your paragraph to your classmates and teacher.

Self-Assessment

Yes No

- I look for information about IT solutions. ☐ ☐
- I describe how they work. ☐ ☐
- I write a paragraph about those solutions. ☐ ☐
- I show my paragraph to my classmates and teacher. ☐ ☐

Target Words

- **IT** (noun): Information Technology; a department of a company that handles computers, internet services, technology, and data systems
e.g. We are planning to discuss IT solutions for an enterprise.
- **device** (noun): a machine or equipment
e.g. An IT solution provider can recommend a new server, or provide maintenance to repair computers or any other device.
- **back up** (phrasal verb): to make a copy of information in a computer to keep it safe in case it is lost
e.g. You can implement a backup solution plan and adopt data disaster recovery procedure.
- **power outage** (noun): an interruption in the supply of electricity
e.g. You can avoid losing information due to power outage, or a server crash.
- **start-up** (noun): a small business or company that has just been started or set up
e.g. It can help you reduce costs for small companies and start-ups.
- **consultant** (noun): a specialist who gives advice to companies about a specific field
e.g. If you are thinking of hiring a consultant company that can be a good idea.

Learning Points

Modal Verbs Review, Have To, Can.

This learning point helps you to understand the use of the modal verbs Can and Have to.

CAN

Can is very easy to use because you use it with any subject pronoun and its form never changes. Moreover, when you combine **can** with a verb, it is not necessary to add "s" to the end of that verb.

You use the modal verb **can** with different purposes; for example, with it, it is possible to talk about abilities and possibilities. Also, you use this modal verb to make requests.

Take a look at how you use **can** in the affirmative, negative, and interrogative forms.

Affirmative

S + can + verb base form + complement

Example:

I can fix a computer.

Negative

S + can't (cannot) + verb base form + complement

We can't improve your software right now.

Interrogative

Can + s + verb base form + complement?

Can you help us with the programming?

HAVE TO

When you use **have to**, especially in the affirmative form, you want to refer to actions that are mandatory to do. In other words, **have to** helps you to talk about obligations. When you use have to in the negative form, the meaning changes a little bit. **Have to** in the negative form means that some action is not necessary to do.

When you use **have to**, you need to be careful because it changes depending on the subject pronoun (I, you, he, she, etc.) that you use. Take a look at the following chart. It provides you with the structures of have to in the affirmative, negative, and interrogative forms in the simple present tense.

Learning Points

AFFIRMATIVE FORM					
I, you, we, they		have to	upgrade	the PC's system.	
he, she, it		have to			
NEGATIVE FORM					
I, you, we, they		don't have to	upgrade	the PC's system.	
he, she, it		doesn't have to			
INTERROGATIVE FORM					
Do	I, you, we, they		have to	upgrade	the PC's system.
Does	he, she, it				

Structures:

Can	Have to
	Affirmative: S + have to/ has to + verb base form + complement I have to fix my brother's laptop I broke it.
	Negative: S + don't have to / doesn't have to + verb base form + complement You don't have to improve our software now, you can do it next week.
	Questions: Aux do/does + s + have to + verb + complement? Do you have to hire a consultant? Wh + aux do/does + s + have to + verb + complement? What do you have to do to make my software work?

Examples

- *You can implement a backup solution plan and adopt data disaster recovery procedure.*
- *You have to do it as soon as possible to avoid having more problems in the near future.*

Learning Points

Common IT Problems In a Small Business.

The IT department at a company plays an important role. Its performance reflects on the growth and achievement of goals.

The following is a description of the most common IT problems a small business can have.

Integration Issues

When a business implements new technology and it is not done effectively, then, it can become inefficient because programmers may have to enter information twice or information ends up stored in different places.

Backup and Disaster Recovery Challenges

Data disasters such as power outage, accidentally deleting files, or a server crash can result expensive. Therefore, every business should plan a backup to avoid these critical experiences.

The main causes aren't uncovered or addressed-

Pay attention to small signs or problems; an issue can be the cause of a bigger problem. IT departments don't solve issues; they need to solve the root problem.

Security Risks

Prevent your system from being hacked. It may result more cost effective to consider investing on your business' security. It may also keep a company out of trouble depending on how much sensitive information it keeps.

Waiting Until Something Breaks

Make sure you offer maintenance permanently to ensure all your system works properly. Every problem starts with a little signal which means many problems can be prevented and solved when the problem is still cheaper and easier to solve; don't wait until the problem may become urgent.

Examples

- *Waiting until something breaks and not being cautious about security risks, hackers can be targeting your company.*
- *One enterprise had integration issues when new technologies were implemented, so every time they had to look for the information in different databases and information was duplicated.*
